

Odoo 19 Development Practical Evaluation Scenario - Harsha

Evaluation Duration:

- Duration: 3 working days
- Available time: 8 hours per day
- Total effort allocation: 24 hours
- Target Platform: Odoo 19

Objective:

Develop a complete installable Odoo 19 custom addon module based on the assigned business scenario.

The implementation should demonstrate practical knowledge of Odoo 19 module development, ORM, business logic, security, views, and documentation.

Business Scenario

Equipment Maintenance Management System

A service company requires an Odoo 19 module to manage equipment, maintenance requests, technician activities, spare parts usage, and maintenance costs.

The candidate should develop a complete maintenance management solution.

Functional Requirements:

1. Equipment Master

Create equipment records:

- Equipment Name
- Serial Number
- Category
- Location
- Purchase Date
- Warranty Expiry Date
- Responsible Employee

2. Maintenance Request

Create maintenance requests:

- Request Number (automatic sequence)
- Equipment
- Request Date

- Request Type
- Description
- Assigned Technician
- Priority
- Status

Workflow:

New → Assigned → In Progress → Completed / Cancelled

3. Maintenance Activities

Maintain:

- Activity Description
- Technician
- Hours Spent
- Labour Rate
- Cost

4. Spare Parts Consumption

Maintain:

- Product
- Quantity
- Unit Cost
- Total Cost

5. Cost Calculation

Calculate:

- Labour Cost
- Spare Part Cost
- Total Maintenance Cost

6. Reporting

Provide:

- Equipment maintenance history
- Maintenance cost analysis
- Pending maintenance report

Technical Expectations

The developed Odoo 19 module should include:

- Proper addon structure
- Manifest file

- Python models
- XML views using Odoo 19 standards
- Menus and window actions
- Security access configuration
- User groups and record rules where required
- Business validations
- Computed fields where required
- Proper ORM implementation
- README.md file
- TECHNICAL.md file

Development Standards:

- Follow Odoo 19 developer guidelines.
- Follow PEP8 Python standards.
- Maintain clean and maintainable code.
- Use proper naming conventions.
- Provide meaningful comments for complex business logic.

Expected Deliverables:

- Complete Odoo 19 addon source code
- Database testing evidence
- Screenshots or demonstration
- README.md
- TECHNICAL.md
